

1 What is claimed is:

2 1. A self wiping toiletry device comprising:

3 a housing of a substantially "L" shaped form having a stem with a first end and a base in the
4 form of a mandrel with a second end; and

5 a hand grip substantially near said stem and mounted with said housing; and

6 a release button substantially near said stem; and

7 a jaw system mounted substantially near said base and capable of opening sufficiently to fit
8 one or more pieces of toilet paper within said jaw system and closing sufficiently to hold said toilet
9 paper; and

10 a linkage connected between said jaw system and said release button whereby opening
11 movement of said release button causes said jaw system to open and create a gap, thereby allowing
12 a user to install and hold said toilet paper whereby said user may use said one or more pieces of toilet
13 paper to wipe after toilet use.

14

15 2. The self wiping toiletry device as set forth in claim 1 whereby:

16 said jaw system comprises a retainer arm pivotably mounted with said mandrel and capable
17 of mating with said mandrel whereby said toilet paper is held.

18

19 3. The self wiping toiletry device as set forth in claim 2 whereby:

20 said mandrel has one or more grooves having serrations; and

21 said retainer arm has one or more serrations which mate with said mandrel serrations.

22

23 4. The self wiping toiletry device as set forth in claim 2 whereby said retainer arm further
24 comprises:

25 an elongated member having a top side which mates with a contour of said mandrel; and

26 a rear end having a tab, a linkage hole which mates with said linkage, and a hub which mates
27 with a pivoting shaft of said housing thereby allowing said retainer arm to pivot; and

28 a torsion spring having a first arm and a second end and placed around said hub and pivoting
29 shaft, said torsion spring first arm abutting with said tab and said second end abutting against said

1 housing.

2

3 5. The self wiping toiletry device as set forth in claim 1 further comprising:

4 one or more springs connected with said jaw system and biasing said jaw system closed when
5 said release button is not provided with opening movement, thereby holding said toilet paper.

6

7 6. The self wiping toiletry device as set forth in claim 1 whereby:

8 said hand grip substantially rotates on said stem whereby said toilet paper may be rolled prior
9 to installing and holding said toilet paper with said jaw system.

10

11 7. The self wiping toiletry device as set forth in claim 6 further comprising:

12 a grip release locking switch capable of locking said hand grip and prevent said hand grip from
13 rotating.

14

15 8. The self wiping toiletry device as set forth in claim 7 whereby:

16 said hand grip further comprises one or more notches which mate with one or more
17 projections on said grip release locking switch thereby providing the capability of locking said hand
18 grip and preventing said hand grip from rotating.

19

20 9. The self wiping toiletry device as set forth in claim 8 whereby:

21 said housing has an opening capable of slidably holding said grip release locking switch.

22

23 10. The self wiping toiletry device as set forth in claim 1, said housing further comprising:

24 a cavity having one or more guides for positioning said linkage within said cavity; and
25 one or more pivoting shafts for holding said jaw system.

26

27 11. The self wiping toiletry device as set forth in claim 10, said linkage further comprising:

28 an elongated member having one or more slots which mate with said guides within said cavity
29 and a first end with said release button and a second end with one or more positioning shafts.

1 12. The self wiping toiletry device as set forth in claim 1, said housing further comprising:
2 one or more extending rings which mate with an interior of said hand grip, thereby holding
3 said hand grip onto said housing.

4

5 13. A self wiping toiletry device comprising:

6 a nearly "L" shaped housing having a stem, a base, a cavity, a linkage within said cavity, a jaw
7 system mating with said base and capable of holding one or more pieces of toilet paper, and a hand
8 grip on said stem; and

9 said linkage having a first end with a release button and a second end connected with said jaw
10 system whereby opening movement of said linkage causes said jaw system to open thereby allowing
11 said toilet paper to be placed onto said base and used for wiping after toilet use.

12

13 14. The self wiping toiletry device as set forth in claim 13, whereby:

14 said hand grip rotates upon said stem thereby allowing said toilet paper to be rolled prior to
15 placement upon said base.

16

17 15. The self wiping toiletry device as set forth in claim 14, further comprising:

18 a grip release locking switch slidably mounted within an opening within said stem; and
19 said switch having a projection which mates with one or more notches within said hand grip
20 thereby allowing said hand grip to be locked and not rotate.

21

22 16. The self wiping toiletry device as set forth in claim 13, said jaw system further comprising:

23 a retainer arm pivotably mounted with said housing having a top side contoured to mate with
24 said base, a rear end having a hub which pivotably mates with a pivoting shaft within said cavity, and
25 a spring normally biasing said retainer arm against said base when opening movement is not supplied
26 to said linkage.

27

28 17. The self wiping toiletry device as set forth in claim 16, said jaw system further comprising:

29 one or more serrations on said retainer arm or said base.

1 18. A method for performance of self wiping after toilet use, the steps comprising:
2 forming nearly "L" shaped form having a stem with a handle and a base with a mandrel; and
3 installing a jaw system which mates with said mandrel and is actuated with a release button;
4 moving said release button whereby said jaw system opens; and
5 placing one or more pieces of toilet paper within said jaw system and around said mandrel;
6 and
7 moving said release button whereby said jaw system closes; and
8 performing toilet function with a toilet; and
9 wiping after said toilet function with said toilet paper upon said mandrel; and
10 placing said mandrel over said toilet; and
11 moving said release button whereby said jaw system opens, thereby releasing said toilet paper
12 into said toilet.

13

14 19. The method for performance of self wiping after toilet use, as set forth in claim 18, the steps
15 further comprising:

16 forming said handle with said stem whereby said handle rotates upon said stem; and
17 rotating said handle on said stem with said toilet paper whereby said toilet paper rolls upon
18 said handle; and

19 removing said toilet paper from said handle prior to placing around said mandrel.

20

21 20. The method for performance of self wiping after toilet use, as set forth in claim 19, the steps
22 further comprising:

23 forming a locking switch with said stem which is capable of locking said rotating handle; and

24 unlocking said locking switch prior to rotating said handle with said toilet paper; and

25 locking said locking switch after rotating said handle with said toilet paper and prior to wiping

26 after said toilet function whereby said locking allows securely wiping without rotation of said hand
27 grip.

28
